FOREWORD

My fellow Montanans:

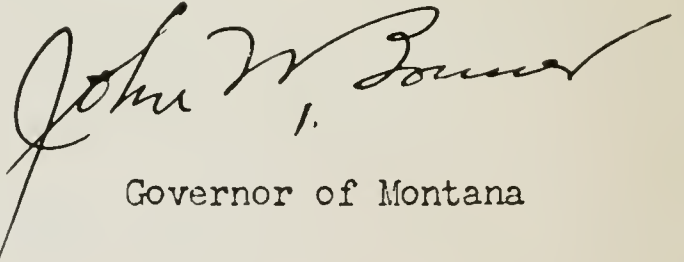

Montana's agricultural progress, an accurate barometer of our State's general economic health, can be traced to several things, among which are:

- 1) More water on more acres, due to development of small irrigation projects.
- 2) A high level of employment, resulting in increased purchasing power.
- 3) A gain in Montana's population.
- 4) An accelerated program of rural electrification and rural telephones.
- 5) Awareness, by our farmers and ranchers, of the value of soil conservation, farm forestry, developing local markets, and the practice of modern production and distribution methods.

The entire program of the Montana Department of Agriculture is geared to aid and counsel all who are associated with the agriculture industry, to promote the general welfare of our farmers and ranchers, and to provide personnel, data and information to carry out this work.

This statistical manual offers a valuable and ready reference to all who are either directly or indirectly associated with agriculture. Its publication represents a great deal of painstaking effort and I commend those who co-operated in its preparation.

Most sincerely,

Governor of Montana

PREFACE

This is the third volume of Montana Agricultural Statistics prepared under a cooperative agreement between the Montana Department of Agriculture, Labor and Industry and the Bureau of Agricultural Economics, United States Department of Agriculture. The assembly, publication and distribution of information of this kind was initiated with an agreement in September, 1945 and with the aid of funds from several local sources the first bulletin was issued in December, 1946. Second and third issues of Montana Agricultural Statistics have been made available through extensions of the cooperative agreement and with funds appropriated by the thirtieth and thirty-first sessions of the Montana Legislature. The statistical program of the United States Department of Agriculture limits the preparation of data to the "state" level, and it would not be possible for the B.A.E. office in Montana to compile the county information in this bulletin without contributions from a cooperating agency. In the course of their regular program of work both the state and federal departments collect statistical information. Through cooperative effort much more of this information can be made available for public use.

The need for statistics contained in this bulletin is manifest by the numerous and consistent requests for information of this kind. Many copies of the first and second issues have been distributed regularly to individuals and firms interested in county crop and livestock data. Among its many uses, the bulletin serves as a reference and guide to persons, agencies and companies associated with the: production, marketing, shipping and processing of agricultural commodities; manufacturing and distribution of machinery, equipment, supplies, fertilizer and other goods used on farms and ranches; plans and development of irrigation projects; determination of farm and ranch credit rates.

MONTANA'S RANK

Montana is distinguished by its rich natural resources, scenic beauty, friendly people and prosperous agriculture. It ranks high among other states in agricultural production, income and developments as indicated by the following table.

Position of Six Leading States in Selected Phases of Agriculture, 1948 *

	First	Second	Third	Fourth	Fifth	Sixth
Mustard Seed Production ____lbs.	Montana	Calif.	-----	-----	-----	-----
Protein Content of Wheat.....%	Montana	-----	-----	-----	-----	-----
Acres Stripcropped	Montana	N. Dak.	Nebr.	Colo.	S. Dak.	Wyo.
Increase in Cropped Acres....**	Montana	S. Dak.	Calif.	N. Dak.	Colo.	Wash.
Spring Wheat Production.....bu.	N. Dak.	Montana	S. Dak.	Idaho	Minn.	Wash.
Wool Production, ...lbs.	Texas	Wyo.	Montana	Calif.	Utah	N. Mex.
Lamb's Raised Number	Texas	Wyo.	Calif.	Montana	Utah	Idaho
Sugar Beet Production.....Tons	Calif.	Colo.	Idaho	Montana	Nebr.	Mich.
Total Acres Irrigated	Calif.	Colo.	Idaho	Montana	Wyo.	Utah
Barley Production bu.	N. Dak.	Calif.	S. Dak.	Minn.	Montana	Colo.
Alfalfa Seed Production.....bu.	Kans.	Utah	Ariz.	Okla.	Montana	Calif.
Flaxseed Production bu.	Minn.	N. Dak.	S. Dak.	Calif.	Iowa	Montana
Dry Pea Production cwt.	Wash.	Idaho	Ore.	Colo.	Calif.	Montana
Cash Income Per Farm Dol.	Ariz.	Calif.	Nev.	Wyo.	Colo.	Montana

* Production and income items relate to 1948; other items to various recent periods.

** Rank based on total acres harvested in 1948 as a percentage of average acres harvested during the decade 1937 to 1946.

CONTENTS OF BULLETIN

State statistics for the years 1947, 1948, 1949 and averages for the ten years, 1937 to 1946, are presented in this bulletin. It also contains general county data for 1948 and 1949, and harvested acreages of specified crops by counties for the years 1920 to 1943. Previous issues have carried long-time historical series of state data for the years prior to 1948 and county data for the years 1944 to 1947. Some revisions of the 1947 state statistics have been made and in such cases the figures appearing in this bulletin supersede those in the December 1948 issue. This bulletin consists of the following:

I. CHARTS:

1. "Cash Receipts From the Sale of Principal Farm Products and Government Payments, 1929-1949" points up the sharp increase in agricultural income of recent years. Cash values of agricultural products used on farms and ranches are not included in the figures used for this chart.
2. The "All Crops" chart shows the value of irrigated crop production in Montana in relation to total crop production. Irrigation is vital to Montana agriculture, particularly during years of drought such as was experienced during the thirties and in 1949.

II. MAP:

1. The outline map inside the front cover identifies the counties which are prominent in crop production and those which are prominent in production in livestock and livestock products.

III. TABLES:

State Statistics:

1. Varieties of Wheat Grown in Montana. This table illustrates the development of new varieties of wheat and their replacement of others since 1919.
2. Chemical Control of Weeds in Montana Wheat. Since 1947, the chemical treatment of wheat for control of weeds in Montana has gained considerable prominence. The number of acres sprayed by various cropping practices and by geographic areas, also the effects of spraying on yield per acre, were determined by a cooperative survey conducted by the Montana Department of Agriculture and Bureau of Agricultural Economics, U. S. Department of Agriculture.
3. Total acreages planted, acreages harvested, yield per harvested acre, production, price, value of production and value of production per acre.
4. Irrigated and non-irrigated data on acres harvested, yield per harvested acre, production, value of production and value of production per acre.
5. Disposition of crop production, farm stocks and value of sales.
6. Livestock and poultry inventory numbers, value per head and total value as of January 1 each year.
7. Production, disposition and sales value of livestock, poultry, livestock products, dairy products and poultry products.

County Statistics:

1. Harvested acreages of grains and flaxseed for each of the years 1920 to 1943.
2. Crop acreages planted, irrigated and non-irrigated acreages harvested, production and value of production and livestock and poultry inventory numbers with values.

CHEMICAL CONTROL OF WEEDS IN MONTANA WHEAT—1949

In 1949 approximately two and three-fourths million acres or 47 per cent of the total wheat acreage in Montana was sprayed with chemicals for the control of weeds. Two-thirds of the winter wheat was sprayed and a little more than one-third of the spring wheat received weed killing chemicals. A larger area may have been treated had not winter kill and the early drought inflicted heavy abandonment of the seeded acreage.

It is difficult to measure the effect that chemical weed sprays have upon wheat yields because there are many other factors responsible for yield differentials. The choice that the farmer has of spraying weeds in fields with the better prospects rather than those with the poorest prospects may show an unrealistically higher yield in favor of the sprayed acreage. The differences, therefore shown in yields of unsprayed and sprayed wheat may include many other factors. An analysis of the data shows the unsprayed planted winter wheat acreage returned an average yield of 14.9 bushels per acre in 1949, compared with 17.8 bushels for the acreage sprayed. Unsprayed spring wheat yielded 8.7 bushels against 11.7 on that where the weeds were controlled. These calculations were based upon summer fallowed and continuously cropped dry land wheat and excluded the irrigated and volunteer acreage.

* Illustration: In 1949 Beaverhead County held 13th place among the 56 counties in the total value of all crops produced, 14th place in number of acres harvested for all crops, 1st place in number of irrigated acres harvested and 44th place in number of bushels of winter wheat harvested. Corn production was insignificant, hence the county has no rating for this item.
